

Application (Microsoft Word)

Description of application: The application I decided to write about is what I am using right now, which is Microsoft Word. This app was developed by two guys named Richard Brodie and Charles Simonyi. This application was created so that people can create documents and use different font types. This app was created in 1983, so it has been around for 40 years. This app runs through office 365.

Why I recommend the app: I like Microsoft word because it is available in mostly all computer systems. Documents are easy to save, and this especially helps when you are in college and need to send documents to your professors. My favorite part about the application is that it has a large variety of fonts. It is a helpful way to make your papers look neat. Fonts give your paper character, and it is helpful when designing a project that a teacher assigns.
